

Silta solutions is a budding start-up that aims to bridge organizations to the digital cloud. Unlike traditional I.T. projects, our business is a software-as-a-service (SaaS) based model which means that companies are able to take in to use digital cloud solutions without having to spend on capital expenditure. We not only provide you the cloud platform, we also provide you data and analytics so you can turn your data into advantage.

Our solutions are currently being deployed with major franchise corporations, BPOs and Oil & Gas companies. We have a major focus on e-Invoicing, accounts payable and procurement, however, we are also helping our customers in digital marketing, branding and website hosting.

Since our founding in 2016, we have been busy deploying projects and continuously learning our customers' unique business cases.
